COVID-19: Mitigating cyber risks during crisis

In light of the COVID-19 crisis, most organisations have invoked their business continuity plans (BCPs) across the globe. However, adopting work from home comes with its own set of challenges. Cyber criminals have begun taking advantage of unsuspecting users and tackling cyber-attacks in these challenging times could result in significant drain of resources. Key stakeholders/CXOs in the organisation will need to come together to navigate this comprehensively.

Here’s how you can HALT and consider steps to effectively mitigate cyber risks during these challenging times

**Activate Business Continuity strategy**
- Devise and invoke a holistic BCP covering the pandemic scenario.
- Take need-based necessary approvals from the top management.
- Define standard operating procedures (SOP) for employees to work from home using either company-specific communication channels or other channels such as MS Teams/Skype etc.

**Secure your IT assets**
- Enable two-factor authentication for any connectivity to office network.
- Patch remote access supporting infrastructure with latest updates.
- Update antivirus, malware protection programmes, data leakage prevention (DLP), mobile device management (MDM) and other solutions on time to ensure endpoint security.
- Issue advisories to employees on relevant anti-virus or malware updates required to secure home networks.

**Prepare a cyber-attack defence model**
- Take periodic backups and ensure proactive IT/system patch updates to minimize cyber attacks.
- Identify, validate and authorise legitimate emails to avoid possible data breach or phishing attacks.
- Make employees aware of various phishing attacks prevalent today. Refer to Cert-In advisory for more details on COVID-19 related attacks.
- Stay up to date on various cyber attacks and with inputs from various security feeds, include them in a Cyber Threat Intelligence Model to identify trends and emerging risk/threat areas and provide timely warnings.
Considering the above pointers, all organisations will need to ponder about their BCPs whether documented or undocumented in a bid to enable remote working or work from home for their employees. As much as there is risk of operational continuity, loss of the organisation’s or customer’s data cannot be ignored. Further, due to sudden invocation of the BCPs, organisations might fail to meet their cyber/privacy obligations with their vendors, third-parties and business partners.

Grant Thornton’s Cyber Risk team can help you effectively plan and mitigate potential cyber risks to navigate these challenging times.
